## Welcome to JoliCampus

Led by the passion to work well and that of cutting-edge technologies, JoliCode is launching JoliCampus, its training center.

Beyond the simple transmission of knowledge, JoliCampus offers customized support for those with the aim of realizing projects sustainably. **Our aspiration: Instruct differently to instruct better.**

### Our courses are instructed by JoliCode experts

JoliCode is a French company based in Paris and created in 2012. **Our goal is to help improve the quality level of web projects.** More precisely, we have qualified experts trained in using technologies PHP - Drupal CMS, frameworks symfony1, Symfony2, Zend Framework and Silex - mobile development (Appcelerator) and javascript development "server side" with node.js.

### Our sessions

We can tailor the session to your needs, focusing on a **particular aspect of development projects.**

The last day of training involves the construction of a mini-project, to select from a range of topics that cover the main issues of the development of the technology you choose.

Before each training session, our instructors will contact the participants to determine their goals and whether or not to focus on a particular subject. This is the right time for you to interact with the instructor to allow them to better understand your objectives and areas that you would like expand your knowledge in.
